Cam Spray Jetters

Jetters are used to clean drain lines in a hurry! Drain clogs are caused by things like built-up soap scum, tree roots, accumulated mineral deposits, dirt, hair, and grease. Slow drains are almost closed, and a jetter is the right tool to clean these lines fast, too.

At one time or another, all homeowners and commercial property owners will need this service. Restaurants in particular frequently need jetting to keep grease-prone drains running. Local governments often outsource these services to contractors, too.

With the right equipment, you can move into this specialty service. All you need is a low-pressure, high-volume pressure washer (with a pulsing flow feature) and the associated accessories.

The pressures needed to clean drain lines depend on the particular job, but usually range between 1500 and 4000 PSI. 2500 PSI is the most typical pressure used.

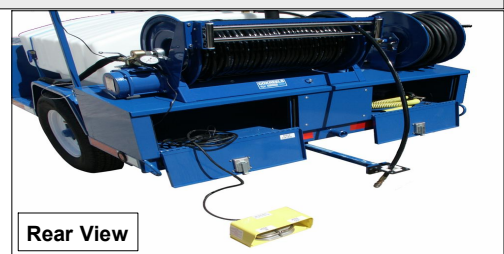

Cam Spray has been building quality Jetters for years. They build electric and gasoline-powered models, including portables, truck-mounts, and trailer units. Depending on the model you select, you will find gas engines with low-oil shutoff, an adjustable pressure valve, a chemical injection system, an 80 mesh strainer, and lots more. Check them out here!

If you would like to have a custom-tailored rig built to fit your operation, call us for an excellent price. Cam Spray makes other models that are not listed here. We can get you exactly what you want!

For more information on one of these portable jetter systems, call our store at 301-519-9274
